

Accessibility Statement

for Control Edge

Visma Software AB is committed to ensuring digital accessibility and inclusivity for people with disabilities. We are continuously improving the user experience for everyone and applying the relevant accessibility standards to our current and future products.

Last Updated: 2025-06-20.

Compliance Status

Visma is dedicated to designing and developing future products with accessibility as a core principle. Our goal for future releases is to meet standards like WCAG 2.2 Level AA and EN 301 549.

Control Edge is currently undergoing a significant re-write of the interface to a new web platform for all processes. While accessibility improvements are a key part of the future versions, the scope for implementing fixes in the current cloud version is limited.

As a result, the current version of Control Edge does not yet fully meet current accessibility standards.

We are prioritizing the development of new, accessible pages to replace these older pages. As we continue to develop and update our product, we will strive to ensure that all new content meets these accessibility standards.

Known Accessibility Limitations

Due to the ongoing re-write and the application's original development context, users of assistive technologies or those with disabilities may experience barriers in the current version, including but not limited to:

- Limited Keyboard Navigation: Not all interactive elements may be fully operable using only a keyboard.

- Color Contrast: While based on a standard library color scheme, specific contrast ratios may not consistently meet the WCAG 2.2 AA requirement of 4.5:1 for text and 3:1 for UI components across all elements.
- Text Alternatives: Alternatives for multimedia or non-text content may not be consistently provided.

Addressing these limitations comprehensively is planned as part of the re-write of the application.

Alternatives to The Limitations

If you encounter difficulties using the *current* version, consider these potential alternatives:

- Utilize accessibility features built into your operating system or web browser (e.g., contrast adjustments, text resizing, zoom).
- Explore third-party browser extensions or assistive technology tools that might offer enhanced compatibility.

Feedback and Contact Information

We welcome your feedback on the accessibility of Control Edge. Please let us know if you encounter accessibility barriers:

* Email: visma.control@visma.com

* Phone: 010-141 27 50

Your feedback is valuable and will help inform the ongoing and future product development.

**Emails sent to the above email address should have in the subject line "Accessibility Control Edge"*

Ongoing Commitment to Accessibility

While the current version of Control Edge has known limitations, Visma is dedicated to designing and developing future products with accessibility as a core principle. Our goal for future releases is to meet standards like [WCAG 2.2 Level AA](#) and [EN 301 549](#). We are embedding accessibility considerations throughout our development lifecycle for all our products.
